### **Functions**

- . Include hunders of games
- . Typical JAMMA interface
- . MultiPlayer
- . Fulling coins memory
- . 3 Seconds to mainmenu

### **Module contents**

- Host
- Power Supply
- AC power line
- L plank
- User manual
- 20P ATX Line (accessories)
- A set of an advertisement of machine
- Game list

**Before install**

1. Put the host in the anti-electrostatic packing bag before install.
2. Hold the mainboard edge carefully, don't touch the accessories of the mainboard.
3. Face up the side which there are components, and put it into the box.
4. Do not distort or heavy pressure circuit board.
5. When the host working, the periphery please not to place the miscellaneous articles or objects, and please reserve space for cooling.

**Basic compose Intro**

**Quick Install Manual**

**Basic Install Sequence:** (See the picture above)

1. Connect to the **20P ATX Power Interface** (you can also plug the Power 20P ATX into the Machine).
2. Plug in the **JAMMA 28P** pin.
3. Connect the AC power line in to the **power supply**..
4. Make sure the power box voltage is the same with the local region. then Power on .

**Install Warning**

- Notice the direction of the JAMMA 28P, do not put anti.
- When plugging the 20P ATX power, make it was align, or it should be broken. If it is plug in the machine directly, make sure it plugs ok..
- The power supply of the machine and the power box of the cabinet must be connect into the same power supply, and cut the power at the same time (see the picture below). This is very important, or the machine should not working correctly.

- The **B14** of JAMMA 28P(the soldering tin in) link to the same switch of the ground. The function is the same as "**Function Key K5**"(the K5's function please see page 13 "**function key intro**")

### Booting Machine

Boot the machine, and the screen should not synchronization. After about 20 seconds, the game menu was show (if the **system setting switch DIP-2** set to **ON**(see page 10 “**DIP-2, Game mode selection**” ), the last game should run automatic. The game loading should spend some time depend on the game, there is no image on the screen when loading).

### Game Select

1. Enter the main menu, use joystick to select game.  
Joystick up down to select a game.  
Joystick left right to select a page.
2. After coin, and press Ip' s start, it should enter the game loading, don' t coin when game loading. The loading time depend on the game.

### Quit Game (Return to main menu)

- Way 1: Press K5 (see page 13 “Function key intro” )
- Way 2: Press IP' s start for 3 seconds, (see page 11 “DIP-8 start back to menu” ))
- Way 3: Press B14 (see page 7 “Install Warning”

### Shutting down machine

Quit current game and back to the main menu. At last power off (make sure 2 parts of power are off).

---

The user could set coin,diffcult level on "System setting switch (DIP)". The Advanced user could use "System setting menu" or "Game debug mode" to set the params of each game.

We advise the normal just use "System Setting switch (DIP)" to set the params.

Notice! "Game setting menu" and "Game debug Mode" could set many system function, it could cause your machine do not working.

### System setting switch (DIP)

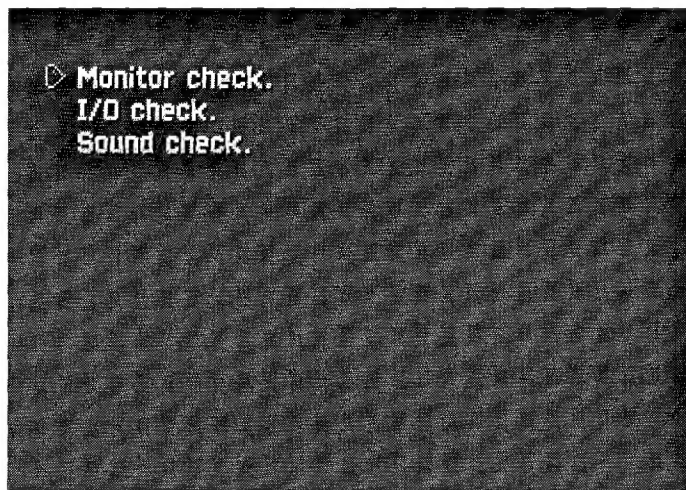

### Function explain

#### ☆ DIP—1

1	Function
ON	System Test (Factory Reset)
OFF	Game Mode (Factory Default)

When the machine error even could not be solving by rest, this function could check and fix system (**Factory Reset** could fix system ).

Power off the machine, and set the **DIP-1** to **ON**, then boot the machine and it should go into the testing mode (see the picture below) .

**Monitor check:**    Test screen ( Use for screen test)  
**I/O check:**        Test joystick ( Use for joystick test )  
**Sound check:**    Test sound (Use for sound test)

**PS:** Press joystick right and press key 1 to quit I/O Check.

☆ **DIP-2, Game mode select**

2	Function
<b>ON</b>	Normal Arcade Mode
<b>OFF</b>	User Mode (Default)

**Normal Arcade Mode:** After boot, it loads a game automatic.

Advice to set **DIP-8** to **ON**

**User Mode:** After boot, Go in to the game select menu。 Advice to set **DIP-8** to **ON**.

## ★ DIP—3、DIP—4, Game level setting

3	4	Game Level
ON	ON	Very Hard
